Prototypes as solution

Date: 2026-11-03. The prototypes apply the design system to real screens. They use only `design-system/mobve-design-system.css`; data is illustrative. The Mobve name appears as text only: the logo was not redrawn, as the brand rules forbid replacing it.

1. Prototypes

File	What it shows
`design-system/prototype.html`	Website: header, hero, scenario tabs, dark demo band, solutions, pricing, FAQ, contact form, footer. App: sidebar, header, information notice, KPI tiles, call volume chart, received and completed chart, attention panel, week of appointments, maintenance table, empty state, confirmation dialog
`design-system/appointments.html`	Appointments screen with the structure of the current app: reporting filters, six scorecards, week calendar with category colors, attention panels, upcoming list with category and status
`design-system/index.html`	Design system reference with every component and state

2. Findings and how the prototypes answer them

Finding	Where	Answer in the prototypes
No working contact path	Website	Contact form that works without the chat, with validation and a confirmation
Demo looks active but is unavailable	Website	Disabled call button, warning notice, early access action
Brand font not loaded, 20 sizes, text under 12 px	Website, app	Inter Variable, nine type roles, 12 px minimum
Weak or missing hover and pressed states	Website, app	Every control shows distinct hover, pressed, focus, disabled and loading states
Six blues, 30 color variables	Website, app	6 base colors and calculated states
Status colors unclear	Website, app	Traffic-light signals with dark text, icons and tints

Finding	Where	Answer in the prototypes
Pricing without emphasis	Website	One recommended plan with a secondary badge (the plan choice is an example)
Property cards look clickable but are not	Website	Solution cards are links with hover
Chat button covers content	Website	Not prototyped
Category colors collide with primary and error	App	Five new category colors on dots, event edges and tints
Chart legends too small	App	14 px markers and labels; Completed in success green; average as dashed gray line
Touch targets under 44 px	Website, app	44 px controls and menu items
Resident requests error, Pipeline overflow, page titles	App	Not prototyped: they are code fixes in the app

3. How to view

Open the HTML files in a browser from this repository; they load the CSS by relative path and the Inter font from Google Fonts for the preview. PDF exports of each page are in `docs/pdf/`.
